## Who We Are?

Mobility Showers is an established locally based company specialising in creating accessibility showers designed to help you to remain independent in your own home.

Our mission is to make showering easier and more independent, helping elderly and disabled users to create accessible, safe, comfortable and stylish wet rooms. We provide a smooth and stress-free installation process from start to finish. We will take away your old bath and dispose of it. Where possible we recycle materials to minimize our impact on the environment

## Charlton Dual Head Thermostatic Showers -Round Head

The Charlton Dual Thermostatic Bar Mixer Shower is a modern and highly-efficient showering solution. Boasting a 245mm shower head and an adjustable handset, this shower is designed with your comfort in mind. Available in Chrome, Black or Brass with a Round or Square Head

*Chrome Round Head*

*Thermostatic Bar Shower*

## Charlton Dual Head Thermostatic Showers -Round Head

### Safe for the whole family

Thanks to the ultra-safe feature, you can rest assured that the whole family will be safe using this shower. A thermostatic cartridge is used to stop temperature fluctuations and a temperature limitation can also be set during installation. These two systems protect any vulnerable users from excessively hot water.

### 40°C safety lock

For added safety, a temperature safety lock is also in place at 40°C, which must be manually overridden for hotter temperatures

### Cool touch and thermostatic control

Safety is paramount and comes well above anything else when buying a shower that's used by young or vulnerable people. These Charlton showers feature cool touch technology that stops any part of the shower from becoming too hot to touch, and thermostatic temperature control to ensure that any changes in incoming water temperature don't affect what comes out of the shower head.

### **Precise temperature control**

Standard showers can have hot temperature spikes when others in the house turn on taps or flush the toilet.

Thermostatic control means that this shower will hold its temperature steady at all times. It dynamically adjusts the hot and cold water offsetting the everyday changes in water pressure experienced in most family homes.

### **Maximum temperature override**

With the Charlton mixer shower, you can set the maximum temperature to avoid any vulnerable users getting scolded. However, should you prefer a hotter shower there is a cleverly fitted override button that can be used to increase the temperature. It must be pressed down whilst turned to stop it being used accidentally, keeping all users completely safe.

# Walk in Shower FAQs

## What is a walk-in shower?

A walk-in shower, or mobility shower, is a shower that you can enter without having to step over a high tray or threshold. Our walk-in showers come complete with a low-profile non-slip shower tray. Owing to this they have less hazards than traditional showers with a higher tray..

Low level and walk-in showers are very popular with people who have limited mobility, whether this is owing to old age or low mobility in general, due to this ease of access and the various features such as shower seats and grab bars, make the showering experience feel safer and more relaxing.

What are the advantages of a walk-in shower?

Walk-in showers have many benefits for people, whether they have limited mobility or not.

The low-profile-mon-slip shower tray makes entering and exiting the shower enclosure much safer and easier which can instil confidence in an older person

Low-level access showers also allow wheelchair entry and exit, making them even more accessible. The low level access enclosures are also more spacious allowing room for a carer if needs be.

Some of the features that are included with our shower enclosures/low level access installations

Shower seats – foldable and wall mounted

Support handrails

Low-profile non-slip shower trays

Dual head thermostatic shower for easy temperature control system

Enclosures that are easy to clean

## How much is a walk-in shower?

The price of a walk-in shower can vary depending on the style that you want

Upgrading the additional features in enclosure can also change the price. Here are the factors to be aware of:

The style and size of the walk-in shower enclosure

Features that you wish to have in your walk-in shower, such as the type of seat

Upgrading the enclosure/shower or accessories

Integrating the walk-in shower into your current bathroom space

## How much space does a walk-in shower need?

The space required for a mobility walk-in shower will depend on the size of the shower and any additional features, such as a bench or grab bars, but we normally suggest 1.8 m x 1.8 m, enough space is required so that users can enter and exit safely.

Are walk-in showers a good investment?

A walk-in/low access shower is generally considered to be a good investment, as it can improve the accessibility and functionality of a bathroom and are normally suitable for most users.

## Do walk-in showers add value to your home

Walk-in/low level access showers can add value to a home, particularly for homeowners looking to appeal to buyers who may have mobility or accessibility concerns. A walk-in showers often seen as a luxurious and modern feature that is also environmentally friendly and that can increase the appeal of the home.
